

THE BEST WORK CENTERS START AT THE TOP

Workrite's laminated worksurfaces feature a wide variety of popular Wilsonart® high pressure decorative laminates and matching 3 mm edgeband. The core is constructed from 1.125" thick, 45 pound density industrial grade particleboard and is backed with high quality phenolic to ensure balanced panel construction and prevent warping over the life of the product.

Our worksurfaces are available in a wide variety of shapes and sizes with a 10 business day lead time for quantities of 10 or less, and are the perfect finishing touch for any of Workrite's height adjustable frame sets or bases.

They can also be used to refresh the look of your existing fixed height or adjustable height work centers regardless of manufacturer.

Workrite worksurfaces come in a variety of shapes and sizes.
